SUBJECT INDEX

Ammonia
  Chemical nitrogen fixation by molybdenum and tungsten complexes 99
Amphiphilic water soluble phosphines
  New directions in water soluble homogeneous catalysis 795
Anion coordination
  Photochemistry of supramolecular species involving anionic coordination compounds and polyammonium macrocyclic receptors 149
Antitumour
  Interactions of organometallic anticancer agents with nucleotides and DNA 189
Anti-ulcer
  Coordination chemistry of metals in medicine: target sites for bismuth 689
Aqueous organometallic catalysis
  Ruthenium-catalyzed oxidative dehalogenation of organics 385
Ascorbate oxidase
  Inhibitor binding studies on ascorbate oxidase 619
Asymmetric hydrogenation
  Complex catalyzed hydrogenation and carbon–carbon bond formation in aqueous micelles 585
Azurin
  Effects of protein folding on metalloprotein redox-active sites: electron-transfer properties of blue and purple copper proteins 127

Band structure
  Electronic structure of transition metal complex-based molecular metals and superconductors 629
Bioinorganic chemistry
  Coordination chemistry of metals in medicine: target sites for bismuth 689
Bismuth
  Coordination chemistry of metals in medicine: target sites for bismuth 689

Carbon dioxide
  Carbon dioxide coordination chemistry: metal complexes and surface-bound species. What relationships? 335
Carbon dioxide reduction
  Photochemical carbon dioxide reduction with metal complexes 373
Carboxylates
  Photochemical carbon dioxide reduction with metal complexes 373

PII: S0010-8545(99)00090-9

Catalysis
Hydridotris(pyrazolyl)borate ruthenium complexes—properties and applications 109
Catalytic and stoichiometric C–C bond formation employing palladium compounds with nitrogen ligands 809
Catalytic mechanism
Inhibitor binding studies on ascorbate oxidase 619
Catenane
Synthesis of catenanes and molecular knots by copper(I)-directed formation of the precursors followed by ruthenium(II)-catalysed ring-closing metathesis 167
Catenanes
Electrochemistry of coordination compounds: an extended view 233
C–C coupling
Hydridotris(pyrazolyl)borate ruthenium complexes—properties and applications 109
Catalytic and stoichiometric C–C bond formation employing palladium compounds with nitrogen ligands 809
Chalcogens
Polyatomic molecules and aggregates of main group 15/16 elements in of organochromium chemistry 257
Charge-transfer systems
Electrochemistry of coordination compounds: an extended view 233
Chlorinated organics
Ruthenium-catalyzed oxidative dehalogenation of organics 385
Cisplatin
Molecular architecture with metal ions, nucleobases and other heterocycles 653
Cluster complexes
Metal clusters and cyclopolyenes: the face-capping coordination mode 551
Complex stability
Metal ion selectivity and molecular modeling 81
Conductivity
Molecular (super)conductors derived from bis-dithiolate metal complexes 213
Contrast agents
Designing new MRI contrast agents: a coordination chemistry challenge 451
Coordination chemistry
Hydridotris(pyrazolyl)borate ruthenium complexes—properties and applications 109
Copper A
Effects of protein folding on metalloprotein redox-active sites: electron-transfer properties of blue and purple copper proteins 127
Copper(I)
Synthesis of catenanes and molecular knots by copper(I)-directed formation of the precursors followed by ruthenium(II)-catalysed ring-closing metathesis 167
Coronands
Photoinduced control of cation binding ability of non-conjugated bichromophoric receptors 357
Cp*Rh aqua complexes
Bioorganometallic chemistry: synthesis, structure, and molecular recognition chemistry of (η^5-pentamethylcyclopentadienyl)rhodium–DNA/RNA complexes in water 569
Cp*Rh–DNA/RNA complexes
Bioorganometallic chemistry: synthesis, structure, and molecular recognition chemistry of (η^5-pentamethylcyclopentadienyl)rhodium–DNA/RNA complexes in water 569
Cyclopentadienyltricarbonylchromium
Polyatomic molecules and aggregates of main group 15/16 elements in of organochromium chemistry 257
Cyclopolyenes
Metal clusters and cyclopolyenes: the face-capping coordination mode 551
Cytochrome
Magnetic spectroscopic (EPR, ESEEM, Mössbauer, MCD and NMR) studies of low-spin ferriheme centers and their corresponding heme proteins 471

Dendrimers
Redox-active ferrocenyl dendrimers and polymers in solution and immobilised on electrode surfaces 53
Electrochemistry of coordination compounds: an extended view 233
Diastereomer
Substitutionally inert complexes as chiral synthons for stereospecific supramolecular syntheses 535
Diimine
Photochemical carbon dioxide reduction with metal complexes 373
Dinitrogen
Chemical nitrogen fixation by molybdenum and tungsten complexes 99

DNA
Interactions of organometallic anticancer agents with nucleotides and DNA 189
Synthesis, DNA-binding and DNA-mediated luminescence quenching of Ru(II) polypyridine complexes 711
Formation of DNA adducts using nickel(II) complexes of redox-active ligands: a comparison of salen and peptide complexes 761
Ribonucleotide reductases: metal and free radical interplay 775

Electrocatalysis
Exploring the reactivity of the isolated iron-molybdenum cofactor of nitrogenase 669
Electrochemistry
Mechanisms of electrochemical recognition of cations, anions and neutral guest species by redox-active receptor molecules 3
Redox-active ferrocenyl dendrimers and polymers in solution and immobilised on electrode surfaces 53
Electrochemistry of coordination compounds: an extended view 233
Metal clusters and cyclopolyenes: the face-capping coordination mode 551
Electronic structure
Electronic structure of transition metal complex-based molecular metals and superconductors 629
17-electron radical species
Polyatomic molecules and aggregates of main group 15/16 elements in of organochromium chemistry 257
Electron transfer
Effects of protein folding on metalloprotein redox-active sites: electron-transfer properties of blue and purple copper proteins 127
Lanthanide ions as redox probes of long-range electron transfer in proteins 307
Artificial photosynthesis in lamellar assemblies of metal poly(pyridyl) complexes and metalloporphyrins 403
Enantiomer
Substitutionally inert complexes as chiral synthons for stereospecific supramolecular syntheses 535
Energy transfer
Artificial photosynthesis in lamellar assemblies of metal poly(pyridyl) complexes and metalloporphyrins 403
Environment
Chemical speciation contributing to research knowledge and everyday life 177
Enzyme inhibition
Inhibitor binding studies on ascorbate oxidase 619
Enzyme mechanism
Exploring the reactivity of the isolated iron-molybdenum cofactor of nitrogenase 669
EPR active
Homo- and mixed-valence EPR -active trinuclear manganese complexes 837
Europium
Lanthanide ions as redox probes of long-range electron transfer in proteins 307
EXAFS
Development of modern solution chemistry: a search of new fields 735

Facial ligands
Metal clusters and cyclopolyenes: the face-capping coordination mode 551
Ferriheme
Magnetic spectroscopic (EPR, ESEEM, Mössbauer, MCD and NMR) studies of low-spin ferriheme centers and their corresponding heme proteins 471
Ferrocene
Redox-active ferrocenyl dendrimers and polymers in solution and immobilised on electrode surfaces 53
Flat molecular surfaces
Structural chemistry of supramolecular assemblies that place flat molecular surfaces around the curved exteriors of fullerenes 601
Fluorescent
Metal complexes as components of luminescent signalling systems 297
Force fields
Metal ion selectivity and molecular modeling 81
Fullerene compounds
Structural chemistry of supramolecular assemblies that place flat molecular surfaces around the curved exteriors of fullerenes 601

Haptotropic shift
Ring slippage in indenyl complexes: structure and bonding 37
Healthcare
Chemical speciation contributing to research knowledge and everyday life 177

Heme protein
Magnetic spectroscopic (EPR, ESEEM, Mössbauer, MCD and NMR) studies of low-spin ferriheme centers and their corresponding heme proteins 471
Heterocycles
Chemical nitrogen fixation by molybdenum and tungsten complexes 99
Heterosupramolecular chemistry
Heterosupramolecular chemistry: toward the factory of the future 277
Homogeneous catalysis
New directions in water soluble homogeneous catalysis 795
Homo-valence
Homo- and mixed-valence EPR -active trinuclear manganese complexes 837
Hydrotris(pyrazolyl)borate
Hydridotris(pyrazolyl)borate ruthenium complexes—properties and applications 109

Indenyl slippage
Ring slippage in indenyl complexes: structure and bonding 37
Iron(III) porphyrin
Magnetic spectroscopic (EPR, ESEEM, Mössbauer, MCD and NMR) studies of low-spin ferriheme centers and their corresponding heme proteins 471

Lanthanide
Lanthanide ions as redox probes of long-range electron transfer in proteins 307
Lanthanides
Designing new MRI contrast agents: a coordination chemistry challenge 451
Ligands
Are M–N bonds indeed inherently weaker when N is a tertiary rather than a primary or secondary nitrogen atom? 141
New directions in water soluble homogeneous catalysis 795
Lipophilic cations
Structural and solution chemistry of gold(I) and silver(I) complexes of bidentate pyridyl phosphines: selective antitumour agents 823
Low-spin
Magnetic spectroscopic (EPR, ESEEM, Mössbauer, MCD and NMR) studies of low-spin ferriheme centers and their corresponding heme proteins 471
Luminescence
Synthesis, DNA-binding and DNA-mediated luminescence quenching of Ru(II) polypyridine complexes 711
Luminescent
Metal complexes as components of luminescent signalling systems 297

Macrocycle
Designing new MRI contrast agents: a coordination chemistry challenge 451
Macrocycles
Photochemical carbon dioxide reduction with metal complexes 373
Magnetic resonance imaging
Designing new MRI contrast agents: a coordination chemistry challenge 451
Magnetism
Molecular (super)conductors derived from bis-dithiolate metal complexes 213
Manganese
Homo- and mixed-valence EPR -active trinuclear manganese complexes 837
Metal bis-dithiolate metal complexes
Molecular (super)conductors derived from bis-dithiolate metal complexes 213
Metal complexes
Metal complexes as components of luminescent signalling systems 297
Carbon dioxide coordination chemistry: metal complexes and surface-bound species. What relationships? 335
Metal ion selectivity
Metal ion selectivity and molecular modeling 81
Metallodendrimers
Substitutionally inert complexes as chiral synthons for stereospecific supramolecular syntheses 535
Metallodrugs
Coordination chemistry of metals in medicine: target sites for bismuth 689
Structural and solution chemistry of gold(I) and silver(I) complexes of bidentate pyridyl phosphines: selective antitumour agents 823
Metal-sulfur clusters
Exploring the reactivity of the isolated iron-molybdenum cofactor of nitrogenase 669
Micelles
Complex catalyzed hydrogenation and carbon–carbon bond formation in aqueous micelles 585

Mixed-valence
Homo- and mixed-valence EPR -active trinuclear manganese complexes 837
Modified electrodes
Redox-active ferrocenyl dendrimers and polymers in solution and immobilised on electrode surfaces 53
Molecular architecture
Molecular architecture with metal ions, nucleobases and other heterocycles 653
Molecular conductors
Electronic structure of transition metal complex-based molecular metals and superconductors 629
Molecular mechanics
Metal ion selectivity and molecular modeling 81
Inhibitor binding studies on ascorbate oxidase 619
Molecular orbital calculations
Ring slippage in indenyl complexes: structure and bonding 37
Molecular orbitals
Ligand orientation effects on metal–metal, ligand–ligand and metal–ligand interactions 431
Molecular recognition
Mechanisms of electrochemical recognition of cations, anions and neutral guest species by redox-active receptor molecules 3
Bioorganometallic chemistry: synthesis, structure, and molecular recognition chemistry of (η^5-pentamethylcyclopentadienyl)rhodium–DNA/RNA complexes in water 569
MRI
^{1}H and ^{17}O-NMR relaxometric investigations of paramagnetic contrast agents for MRI. Clues for higher relaxivities 321

Nickel
Formation of DNA adducts using nickel(II) complexes of redox-active ligands: a comparison of salen and peptide complexes 761
Nitrogen fixation
Chemical nitrogen fixation by molybdenum and tungsten complexes 99
Exploring the reactivity of the isolated iron-molybdenum cofactor of nitrogenase 669
Nitrogen ligands
Catalytic and stoichiometric C–C bond formation employing palladium compounds with nitrogen ligands 809
NMR spectroscopy
Structural and solution chemistry of gold(I) and silver(I) complexes of bidentate pyridyl phosphines: selective antitumour agents 823
Nobel laureates
Development of modern solution chemistry: a search of new fields 735
Nonlinear optics
Molecular (super)conductors derived from bis-dithiolate metal complexes 213
Nuclear magnetic resonance
Designing new MRI contrast agents: a coordination chemistry challenge 451
Nucleotides
Interactions of organometallic anticancer agents with nucleotides and DNA 189

Organometallic complexes
Interactions of organometallic anticancer agents with nucleotides and DNA 189
Outer sphere solvation
Are M–N bonds indeed inherently weaker when N is a tertiary rather than a primary or secondary nitrogen atom? 141
Oxidation
Ruthenium-catalyzed oxidative dehalogenation of organics 385
Formation of DNA adducts using nickel(II) complexes of redox-active ligands: a comparison of salen and peptide complexes 761

Palladium
Catalytic and stoichiometric C–C bond formation employing palladium compounds with nitrogen ligands 809
Paramagnetic
Designing new MRI contrast agents: a coordination chemistry challenge 451
Paramagnetic contrast agents
^{1}H and ^{17}O-NMR relaxometric investigations of paramagnetic contrast agents for MRI. Clues for higher relaxivities 321
Parvalbumin
Lanthanide ions as redox probes of long-range electron transfer in proteins 307
Peptides
Formation of DNA adducts using nickel(II) complexes of redox-active ligands: a comparison of salen and peptide complexes 761
Perception
Chemical speciation contributing to research knowledge and everyday life 177

Phase transfer catalysis
Complex catalyzed hydrogenation and carbon–carbon bond formation in aqueous micelles 585
Photocatalysis
Photochemical carbon dioxide reduction with metal complexes 373
Photochemistry
Artificial photosynthesis in lamellar assemblies of metal poly(pyridyl) complexes and metalloporphyrins 403
Photocontrol of cation binding
Photoinduced control of cation binding ability of non-conjugated bichromophoric receptors 357
Photophysical
The photophysical properties of monomeric and dimeric ruthenium polypyridyl complexes immobilized in sol-gel matrices 417
Photoswitches
Photoinduced control of cation binding ability of non-conjugated bichromophoric receptors 357
Pnicogens
Polyatomic molecules and aggregates of main group 15/16 elements in of organochromium chemistry 257
Polyammonium macrocycles
Photochemistry of supramolecular species involving anionic coordination compounds and polyammonium macrocyclic receptors 149
Polymers
Redox-active ferrocenyl dendrimers and polymers in solution and immobilised on electrode surfaces 53
Polypyridine
Synthesis, DNA-binding and DNA-mediated luminescence quenching of Ru(II) polypyridine complexes 711
Polypyridyl complexes
The photophysical properties of monomeric and dimeric ruthenium polypyridyl complexes immobilized in sol-gel matrices 417
Post-information technology
Heterosupramolecular chemistry: toward the factory of the future 277
Programmed nanocrystal assembly
Heterosupramolecular chemistry: toward the factory of the future 277
Protein folding
Effects of protein folding on metalloprotein redox-active sites: electron-transfer properties of blue and purple copper proteins 127
Pyridylphosphines
Structural and solution chemistry of gold(I) and silver(I) complexes of bidentate pyridyl phosphines: selective antitumour agents 823

QSAR
Metal ion selectivity and molecular modeling 81

Radical activation
Ribonucleotide reductases: metal and free radical interplay 775
Reaction intermediates
Development of modern solution chemistry: a search of new fields 735
Reduction potentials
Effects of protein folding on metalloprotein redox-active sites: electron-transfer properties of blue and purple copper proteins 127
Relaxometric
^{1}H and ^{17}O-NMR relaxometric investigations of paramagnetic contrast agents for MRI. Clues for higher relaxivities 321
Ribonucleotide reductases
Ribonucleotide reductases: metal and free radical interplay 775
Ring-closing metathesis
Synthesis of catenanes and molecular knots by copper(I)-directed formation of the precursors followed by ruthenium(II)-catalysed ring-closing metathesis 167
Rotaxanes
Electrochemistry of coordination compounds: an extended view 233
Ru(II) complex
Synthesis, DNA-binding and DNA-mediated luminescence quenching of Ru(II) polypyridine complexes 711
Ruthenium
Hydridotris(pyrazolyl)borate ruthenium complexes—properties and applications 109
Ruthenium complexes
Ruthenium-catalyzed oxidative dehalogenation of organics 385
Ruthenium(II)
Synthesis of catenanes and molecular knots by copper(I)-directed formation of the precursors followed by ruthenium(II)-catalysed ring-closing metathesis 167

Safe chemistry
Chemical speciation contributing to research knowledge and everyday life 177
Salen
Formation of DNA adducts using nickel(II) complexes of redox-active ligands: a comparison of salen and peptide complexes 761
Second coordination sphere
Photochemistry of supramolecular species involving anionic coordination compounds and polyammonium macrocyclic receptors 149
Selective synthesis
Catalytic and stoichiometric C–C bond formation employing palladium compounds with nitrogen ligands 809
Self-assembly
Artificial photosynthesis in lamellar assemblies of metal poly(pyridyl) complexes and metalloporphyrins 403
Sensors
Mechanisms of electrochemical recognition of cations, anions and neutral guest species by redox-active receptor molecules 3
Metal complexes as components of luminescent signalling systems 297
Silicon
Redox-active ferrocenyl dendrimers and polymers in solution and immobilised on electrode surfaces 53
Small molecule activation
Photochemical carbon dioxide reduction with metal complexes 373
Sol-gel matrices
The photophysical properties of monomeric and dimeric ruthenium polypyridyl complexes immobilized in sol-gel matrices 417
Solution chemistry
Development of modern solution chemistry: a search of new fields 735
Speciation
Chemical speciation contributing to research knowledge and everyday life 177
Spectroscopic studies
Inhibitor binding studies on ascorbate oxidase 619
Stereochemistry
Ligand orientation effects on metal–metal, ligand–ligand and metal–ligand interactions 431
Stoped-flow
Development of modern solution chemistry: a search of new fields 735
Structural correlations
Ligand orientation effects on metal–metal, ligand–ligand and metal–ligand interactions 431
Superconductivity
Molecular (super)conductors derived from bis-dithiolate metal complexes 213
Supramolecular assemblies
Structural chemistry of supramolecular assemblies that place flat molecular surfaces around the curved exteriors of fullerenes 601
Supramolecular chemistry
Mechanisms of electrochemical recognition of cations, anions and neutral guest species by redox-active receptor molecules 3
Artificial photosynthesis in lamellar assemblies of metal poly(pyridyl) complexes and metalloporphyrins 403
Supramolecular photochemistry
Photochemistry of supramolecular species involving anionic coordination compounds and polyammonium macrocyclic receptors 149
Photoinduced control of cation binding ability of non-conjugated bichromophoric receptors 357
Supramolecular photophysics
Photochemistry of supramolecular species involving anionic coordination compounds and polyammonium macrocyclic receptors 149
Supramolecular syntheses
Substitutionally inert complexes as chiral synthons for stereospecific supramolecular syntheses 535
Supramolecular systems
Electrochemistry of coordination compounds: an extended view 233
Surface reactions
Carbon dioxide coordination chemistry: metal complexes and surface-bound species. What relationships? 335
Suzuki reaction
Complex catalyzed hydrogenation and carbon–carbon bond formation in aqueous micelles 585
Switches
Metal complexes as components of luminescent signalling systems 297
Synthesis
Synthesis, DNA-binding and DNA-mediated luminescence quenching of Ru(II) polypyridine complexes 711

Technology
Chemical speciation contributing to research knowledge and everyday life 177
Template synthesis
Synthesis of catenanes and molecular knots by copper(I)-directed formation of the precursors followed by ruthenium(II)-catalysed ring-closing metathesis 167
Tertiary amines
Are M–N bonds indeed inherently weaker when N is a tertiary rather than a primary or secondary nitrogen atom? 141
Tetraphosphorus trichalcogenides
Polyatomic molecules and aggregates of main group 15/16 elements in of organochromium chemistry 257
Tetravalent palladium
Catalytic and stoichiometric C–C bond formation employing palladium compounds with nitrogen ligands 809
2-Thioxo-1,3-dithiole-4,5-dithiolato
Molecular (super)conductors derived from bis-dithiolate metal complexes 213
Toxicology
Chemical speciation contributing to research knowledge and everyday life 177
Transition metal complexes
Complex catalyzed hydrogenation and carbon–carbon bond formation in aqueous micelles 585
Transplatin
Molecular architecture with metal ions, nucleobases and other heterocycles 653
Trefoil knot
Synthesis of catenanes and molecular knots by copper(I)-directed formation of the precursors followed by ruthenium(II)-catalysed ring-closing metathesis 167
Trinuclear
Homo- and mixed-valence EPR -active trinuclear manganese complexes 837
Tryptophan
Lanthanide ions as redox probes of long-range electron transfer in proteins 307

Vibrational spectra
Carbon dioxide coordination chemistry: metal complexes and surface-bound species. What relationships? 335

Ytterbium
Lanthanide ions as redox probes of long-range electron transfer in proteins 307
